

FDE FIELD NOTES · ISSUE 06 OF 10

Two stakeholders, one week.

The operator and the sponsor want different things.
Both are right.

Who needs what

STAKEHOLDER	NEEDS TO HEAR
Operator	What changes in my shift
Their manager	Risk to the queue
Sponsor	Evidence it is worth it
Security	Where data goes
IT owner	Who runs it after you leave

A first week that works

1 Mon: shadow

2 Tue: map + baseline

3 Wed: constraints

4 Thu: thin slice on replay data

5 Fri: one-page readout

No production access needed until the readout is accepted.

The one-page readout

01 What we saw

The workflow, with the judgment step marked.

02 What we measured

Baseline numbers and how we got them.

03 What we will not build

Deleted designs and why.

04 What we need

Access, owner, decision by a date.

Demo day

DO

- ✓ Demo the boring path end to end
- ✓ Use replayed real items
- ✓ Show a failure and the fallback
- ✓ Let the operator drive

AVOID

- ✗ Hand-picked perfect examples
- ✗ Live calls you have not rehearsed
- ✗ Accuracy without a baseline
- ✗ Promising dates for unknowns

RULE OF THUMB

Under-promise in the readout.

The sponsor remembers the number. The operator remembers the Monday.

KEY TAKEAWAY

Give the sponsor evidence and the operator safety — in the same week.

- Map each stakeholder to what they need
- One-page readout by Friday
- Demo the boring path, not the highlight reel

YOUR TURN

Which stakeholder do you find hardest to satisfy in week one?
