

FDE FIELD NOTES · ISSUE 09 OF 10

Shadow, stop, and replay.

How a tool earns the right to go first.

09

Shadow week rules

01 Operator still decides

They read every item, as before.

02 Tool runs beside

Suggestions are logged, not shown as orders.

03 Measure agreement

Daily, on consented items only.

04 Fix overnight

Each disagreement reviewed the next morning.

Replay before live

- 1 Pull last month
- 2 Run the tool offline
- 3 Compare to real outcomes
- 4 Review misses with ops
- 5 Lock as eval set

Replay uses decisions people already made, so you test on real difficulty, not demo data.

Stop rules, agreed upfront

TRIGGER	ACTION
Blocked record shown	Stop immediately
Agreement drops below target	Back to shadow
Export breaks	Pause, alert owner
Operator asks	Stop, no questions

When something goes wrong

01 Stop first

Kill switch, then investigate.

02 Timeline from logs

What the tool saw, suggested, and who acted.

03 Fix + eval case

The incident becomes a permanent test.

PRINCIPLE

The tool has not earned the right to be first.

Until a week of shadow agreement and a clean replay say it has.

KEY TAKEAWAY

Shadow it, replay it, and agree the stop rule before go-live.

- Operator keeps doing the job in shadow week
- Replay last month as the eval set
- Anyone can pull the stop

YOUR TURN

What would you force the operator to keep doing until you have a week of agreement?
