

DEVSECOPS & PLATFORM · ISSUE 08 OF 08

An internal developer platform teams actually use.

Make the right way the easy way, then measure whether it is.

PRODUCT MINDSET

Developers will route around a platform they don't like.

Treat it as a product with users, not a mandate with a portal.

What a golden path includes

01 Service template

Repo, CI, Dockerfile, deploy manifests.

02 Identity and secrets

Wired in, not a follow-up ticket.

03 Observability

Metrics, logs and traces by default.

04 Policy compliant

Passes security checks on day one.

Self-service flow

- 1 Request
- 2 Validate or refuse
- 3 Render from template
- 4 PR to GitOps repo
- 5 Deploy
- 6 Catalog entry

Refuse unsafe requests with a reason instead of silently fixing them.

Platform habits

DO

- ✓ Start with the top 3 pains
- ✓ Ship thin, iterate with users
- ✓ Document inside the template

AVOID

- ✗ Portal first, nothing behind it
- ✗ Mandate before it is better
- ✗ Build what nobody asked for

Measure adoption

METRIC	WHY
Time to first deploy	Onboarding friction
Lead time for change	Delivery speed
% services on golden path	Adoption
Tickets to platform team	Hidden toil

KEY TAKEAWAY

The best platform is the one developers choose.

- Golden path with security built in
- Self-service with clear refusals
- Measure adoption, not features

YOUR TURN

What is the one developer pain your platform should solve first?
